

With regards to the playing field dimensions, ideally a full size pitch of 110m x 70m would be required. This doesn't account for the space around the pitch that would be needed for spectators to be able to stand safely, and coaching spaces. I would say that needs to be ideally at least 5m each side, therefore adding 10m to both those length and width measurement.

As a compromise even a 9-a-side pitch with dimensions 80m x 55m (90mx65m with the surrounding space requirement) would be useful as it would help some of the teams at least.

We would also need some space for storage, to keep the goals etc.....
