

Dear Sally

Have you recently had repeated power cuts in the village? The electric motor has a restart controller that in the event of a power cut, it remembers the time and automatically restarts the clock again 12 hours later, so the time is correct. The only thing that can interfere with this automated process is a few power cuts close together, in which case the controller gets confused. I suspect this has happened.

I will book to visit as soon as I can to reset the controller and the clock time.

Best wishes

Subject: Ashwell Church Clock

Dear xxxxxx

I am writing on behalf of Ashwell Parish Council. The Ashwell church clock is 2 hours slow and chiming accordingly.

Please can you advise your availability and if you are able to assist in resetting it?

Thank you

Sally Roberts – Clerk (on behalf of the Deputy Clerk)
